Professional Summary

Experienced Systems Engineer with a background of over 7 years in web development, specialized in Laravel PHP-MySQL projects. Skilled in full-stack development with a focus on back-end functionalities and complemented by a solid understanding of front-end technologies. Demonstrated growth, adaptability, and problem-solving abilities throughout my career. Committed, collaborative and continuous-learning professional.

Programming related skills and experience

Front-end: JavaScript, ReactJs, NextJs, VueJs, Bootstrap, BulmaCss, TailwindCss

Back-end: Laravel, Laravel-Livewire, Node.Js, PHP, Express.js

Languages/Frameworks: JavaScript, VueJs, PHP, Laravel, Typescript

Databases: MySql, SQLServer, Postgres, MongoDB

Other: Git, Vite, Composer, NPM, WebPack, GitHub, Docker

Working Experience

Programmer analyst

July 2020 – December 2023

FENACREP – Lima, Perú

A 100-employee company that integrates, represents, defends, supports, and guides federated savings and credit cooperatives to foster their growth as resilient and efficient financial entities in serving their members and communities.

Main responsibilities:

- Analyzing functional requirements and documenting them to establish the methodology to follow.
- Modeling databases, designing prototypes, developing code, preparing pre-production environments, and preparing program documentation to meet requirements and provide a good user experience.
- Providing maintenance and technical support to existing applications and fulfilling any other functions assigned by the Chief Information Technologies Officer.

Projects in this position.

Voting systems.

Utilized Laravel with Livewire on the back-end, Tailwind on the front-end, and Git for version control.

- Developed a real-time voting system for boards and committees, enhancing efficiency and transparency in the selection of new members.

EcoScore.

Utilized Laravel with Livewire on the back-end, Tailwind on the front-end, and Git for version control.

- Developed a web survey application to raise awareness about ecological habits during conferences, providing a collective insight into ecological habits.

Web Developer

April 2018 – July 2020

Pacific Institute SAC – Lima, Perú

Specialized magazine with 300 employees, delivering valuable insights on finance, taxes, labor, trade, and law through indexed publications. Serving professionals and businesses with timely legal updates and research contributions.

Main responsibilities:

- Conducted technical analysis of functional requirements and documented the methodology to follow as a Web Development Analyst.
- Executed the development and programming of both the Back-End and Front-End as a Web Developer, utilizing different programming frameworks and version control tools.
- Managed the modeling, design, and maintenance of databases in MySQL as a Database Administrator, utilizing tools such as DbDesigner and Navicat.

Projects in this position

Digital Diplomas

Utilized Laravel for back-end development, employed Vue.js and Bootstrap for front-end development, and managed version control with Git.

- Developed an internal service for a digital magazine, resulting in a 70% increase in subscriptions by providing studies and preparation to members and subscribers.

Systems Specialist and Programmer

June 2016 – April 2018

Garzon Hypermarket – Tachira, Venezuela

Venezuelan supermarket and service chain with 7 branches nationwide, owned by Grupo Garzón S.A. It offers a variety of products, including groceries, appliances, and clothing.

Main responsibilities

- Implemented internal modules on the IntraGarzon website as an Internal Module Developer, utilizing PHP, JavaScript, HTML, CSS, and Bootstrap to cater to the needs of internal employees within the company.
- Managed and maintained hosting and domains on GoDaddy as a Hosting and Domain Administrator.
- Managed and maintained databases in SQL Server and MySQL, as well as web servers in internal and external Linux environments as a Database and Web Server Administrator. Analyzed, maintained, and updated sales at different branches through SQL queries and transactions handling in SAP environments.

Projects in this position

Garzon suppliers.

Utilized Yii Framework (back-end), Bootstrap (front-end), and Git version control.

- Developed a web page for suppliers that enabled order and payment status inquiries, provided a user-friendly tool, and achieved 100% coverage among all suppliers.
